# Sonar HTML Report Generator Plug-in
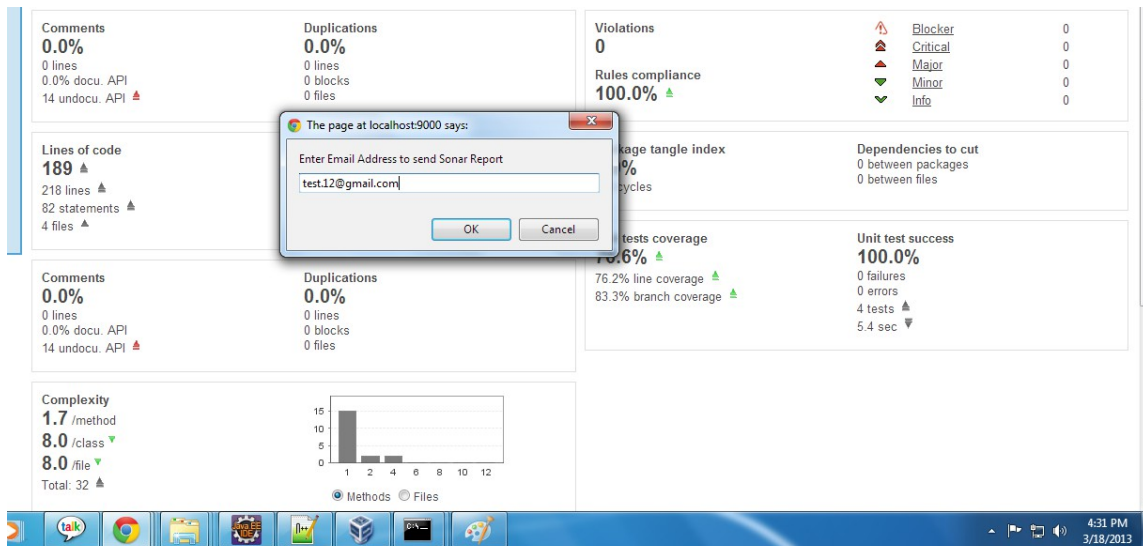

1. Send Email Icon will be appearing on the top left corner of the Dash Board and Project dashboard.

2. Pop up Window will be opened to enter the mail id of the recipient.

3. Once the email id entered, email id will be validated and it will be sent to the Server to send the Sonar report.

4. Sonar Server HTML-Report generator controller will get the Current web page URL and the email id of the recipient
5. Then it will pass the call to the Java code using J Ruby API and it will call the Java code send the email.
6. Then from the given URL HTML content will be pulled and all the style sheet and the relative paths of the file will be replaced with the absolute URLs and it will start sending the email using Apache commons Email API.
